

**National Network Solutions LLC** provides IT consulting services to small and medium-sized businesses. We specialize in *designing Windows® 2003 network infrastructures—including multi-forest enterprise networks*—as well as *upgrading/migrating existing network infrastructures to a Windows® 2003 Active Directory network.*

**NNSS** provides IT consulting services in four key areas...

- **Migration/Upgrade of your Existing Network Directory Service**
  - NT 4 or Windows® 2000 Domain infrastructure to Windows® 2003 Active Directory infrastructure
  - Previous versions of Microsoft Exchange and SQL servers to most recent versions
  - Terminal Services
- **Analysis and Evaluation of your Network Systems, IT Staff, and IT Needs**
- **Restoration of your IT Administration to In-House IT Staff**
- **Partnering with Your HR Department in the screening of qualified IT applicants**

**NNSS** also provides other valuable consultative services including, but not limited to...

- Software licensing issues
- In-house staff training
- Review of corporate computer and internet use policies

#### Description of Services...

- **Migration/Upgrade of your existing Network Directory Service.**

Microsoft Certified Systems Engineer (MCSE) Supervision. One of **NNSS'** Microsoft Certified Systems Engineers will be responsible for the directory service upgrade to Windows® 2003 Active Directory.

**IT Staff Involvement.** If you have an IT staff in place, they will be included in the upgrade of your system. This inclusion allows your staff to not only upgrade their skills, but continue to administer the net-

work after the upgrade is completed—without the high cost of a service contract!

*System Recommendations.* **NNSS** consultants are available to evaluate and make hardware, software, licensing, and network infrastructure recommendations as well as create RFQ bid specifications for your company.

*Technical Support.* **NNSS** can provide technical support services for those companies that do not have trained technical support staff.

- **Analysis and Evaluation.**

*Evaluation of Network Systems, IT Staff, and IT Needs.*

**NNSS** provides an evaluation of your company's Network Systems, IT Staff, and IT needs. The results of this evaluation will be provided to help guide your company's business and IT strategies. **When evaluating IT staff, NNSS' specific goal is to improve your IT staff's knowledge and skills, not outsource or eliminate their positions!**

Some of the questions that **NNSS** consultants can address in their analysis...

*Are your customers or end users being well served?*

*Can services be improved?*

*Is network security being addressed, while maintaining an end user friendly and productive environment?*

*Do salaries for IT personnel meet industry standards?*

*Are IT personnel placed and utilized based on their IT certifications, knowledge, and skill sets?*

*Does the expertise of the IT staff meet the needs of the organization?*

- **Restoration of IT Administration.**

*Eliminate unnecessary outsourcing of IT services.* **NNSS** can evaluate your existing outsourcing contracts to determine which of these services can be moved in-

house to provide more efficient and economical administration of these services.

*Training of in-house IT staff.*

**NNSS** consultants can provide training of your in-house IT staff to bring their knowledge and skills up to date. **NNSS** consultants can provide the following in-house training for your IT staff...

- Installing, Deploying, and Administering...
  - Microsoft® Windows® Server 2003
  - Microsoft® Windows® 2003 DNS Services
  - Microsoft® SQL Server 2000
- Designing, Implementing, and Administering...
  - Microsoft® Windows® 2003 Active Directory Infrastructure
  - Network Security within a Microsoft® Windows® 2003 Network Infrastructure
- Designing Databases and Database Security for Microsoft® SQL Server 2000
- Planning, Deploying, and Administering Microsoft® Exchange Server 2000/2003

- **Partnering with HR Department.**

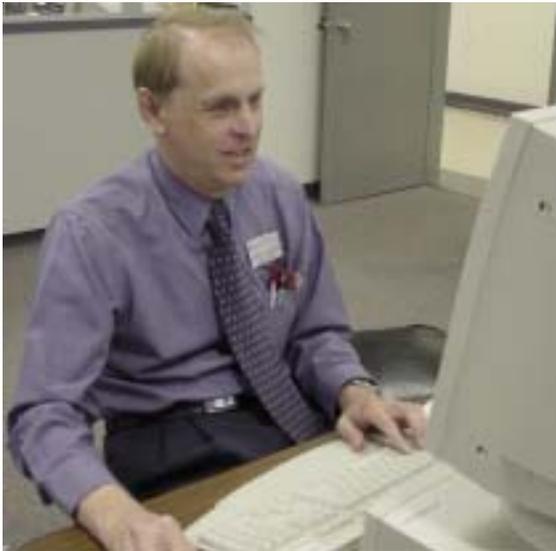

*Partner with your HR Department to Screen IT Applicants.* Most HR departments lack the technical knowledge to adequately evaluate and interview IT applicants—especially applicants for your most critical IT positions (system administrators, data base administrators, network security professionals, etc.) **NNSS** can provide consultants to your HR department that help your HR department advertise positions, screen resumés, interview applicants, and hire the best qualified applicant for your organization's IT department!

### About NNSS...

We at NNSS are committed to providing expert networking and IT consultative services to small- and medium-sized businesses to create and integrate solutions in a timely manner that will support and enhance our client's business strategies.

### Our Philosophy of Network Administration...

At NNSS, our philosophy of network administration is simple: A well designed and administered network infrastructure is one that, for the most part, is invisible to the end users. It does not interfere or complicate the end users' work load. Instead, it ought to enhance their work environment so they can complete their assigned tasks in the most efficient and cost effective manner possible. In the corporate world, "Time Is Money!" and a poorly designed and/or administered network will actually increase the cost of doing business and, therefore, decrease the bottom line for the company and its stakeholders! Therefore, having your network properly designed, deployed, and administered will increase the efficiency of your employees, result in a higher level of employee morale, will give you a faster return on the investment (ROI) of the cost of deploying the network, and create a higher profit margin for your stakeholders!

***We do Windows® 2003!***
